

Do you know how to determine with consumers if virtual care is suitable for them?

Virtual care is used across all healthcare settings including emergency, inpatient, outpatient and community services. This 10-minute microlearning will help you collaborate with consumers and carers to determine whether virtual care is suitable and appropriate for their care needs.

Using consumer scenarios this module will help you:

- explore the considerations, requirements and potential inclusion strategies with consumers to determine if virtual care is suitable for them
- enable consumers to make informed choices based on their care needs and personal preferences.

Appropriate. Suitable. Virtual care.
Collaborate to determine appropriate and safe care.
