How can upskilling in genomics improve patient outcomes?

Genomic testing is rapidly becoming a standard part of healthcare for the diagnosis, treatment and prevention of various health conditions. Four foundational eLearning modules have been created for NSW Health clinicians to upskill and incorporate genomic healthcare into their practice.

Genomics: A beginner's guide for healthcare professionals (Course code: 530551269)

- Develop or refresh your understanding of basic genomics concepts.

Consent for genomic testing (Part 1): NSW Health consent process (Course Code: 523909125)

- Use the form to guide consent conversations with your patients.
  Genomic tests have very different considerations to general medical tests.

Genomic test types and possible results (Course Code: 523909156)

- Differentiate between test types, identify eligible patients and interpret the results.

Screening for genetic conditions before and during pregnancy (Course Code: 538002815)

- Learn about the benefits and limitations of available screening tests and how to support patient decision-making.
